Hi Eva.

Attached please find DEQ's final SCD for the OC Linnton site. DEQ found that the two primary comments (suggested additional monitoring to confirm acceptable concentrations of bis(2-ethylhexyl)phthalate and periodic line cleaning) would largely be addressed by the on-going monitoring and maintenance activities required by the stormwater permit. I added language to clarify this. Although bis(2-ethylhexyl)phthalate will not be monitored under the permit, its absence as a contaminant of concern in the sediment off shore of the facility and presence in the laboratory blank associated with the sampling event in which it was detected give DEQ confidence that additional controls or monitoring are not warranted.

Thank you for your on-going coordination on source control in Portland Harbor.
